

TRANS ISN'T THE NEW GAY OR EVEN THE OLD GAY

	LESBIAN, GAY AND BI-SEXUAL	TRANSGENDER/NON-BINARY
1	Is based upon sexual attraction.	Is based upon regressive stereotypes – clothes, mannerism, play, toys, and alike.
2	Generally static.	Fluid in nature. No consistency in age when trans-identity emerges. The number of detransitioners continues to climb. In 2021, the number of reddit/detrans members was about 17,000. In 9/22, it's 38,610.
3	Does NOT generally have companion mental health issues.	Trans-identified minors seen at the Tavistock, 35% have moderate to severe autism, 62.5% have at least one mental health issue – ASD, ADHD, OCD, anxiety/depression, history of trauma.
4	Relies on established binary of biological male and female.	Rejects well-established principles of biology.
5	Is verifiable – sexual arousal to same-sex is visible/verifiable.	Is NOT verifiable – no test for transgenderism. It is a feeling that is not measurable.
6	Is visible in the animal kingdom.	Is NOT visible in animal kingdom.
7	Does NOT require third-parties to believe their identity.	Requires third parties' validation of the trans-identified person's internal sense of themselves.
8	Does NOT require ANY medical intervention – no drugs or surgeries.	Often requires extreme, irreversible, medical treatments that threaten fertility and sexual function – hormones and surgical procedures to achieve “authenticity”.
9	Does NOT require change in looks, clothes, gait, movement, voice, name changes, etc.	Requires change – hair styles, natural body movements, voice pitch, gait, sitting style to approximate the gender they are mimicking.
10	Has existed in history all over the world.	No proven history of transgender people. Trans advocacy groups re-write history and recast strong females and gay males as being “transgender”. Masculine women and feminine men have always existed.
11	Is NOT a social contagion – one cannot catch “same sex attraction”.	Is a social contagion.

41.7% of girls with late onset of gender dysphoria and 84% of girls with early onset of gender dysphoria [are attracted to other girls](#). 63.6% of males with early onset of gender dysphoria, [are same sex-attracted](#).

Exploring the causality of a trans-identified child IS NOT conversion therapy, BUT transitioning kids who would just grow up to be same-sex attracted is.
